

Cooling System Maintenance Checklist

- Inspect and clean air filters every 1-3 months.
- Check thermostat settings and recalibrate if necessary.
- Clean evaporator and condenser coils to remove dirt and debris.
- Inspect refrigerant lines for leaks or damage.
- Ensure the outdoor condenser unit is free of obstructions.
- Verify that the fan blades are in good condition and spinning freely.
- Clean and inspect ductwork for leaks or blockages.
- Test the thermostat to ensure it communicates correctly with the system.
- Check and tighten electrical connections if needed.
- Schedule an annual professional tune-up for your cooling system.
